1. Supplies:

- clear plastic cup
- cling wrap
- water
- rubber band
- scissors
- nature specimens

2. Have an adult cut a hole in the side of the cup near the bottom.

3. Stretch a piece of cling wrap across the top of the cup and secure with a rubber band.

4. Find a specimen and place it through the cut-out hole in the bottom of the cup.
5. Pour a small amount of water on top of the cling wrap.

Look at your specimen through the water. The water acts as a lens and makes the specimen look bigger!

Go outside and find more specimens!
